

CANVAS 'U' SEAL

Material - Canvas Impregnated Nitrile Rubber.

Operating Limits : Pressure 350 Bar.

SIZES IN MM, Prices are of NBR+Canvas.

**AIR SPRINGS**

Rubber airsprings are usually called airspring, air bellow or air bag. It is an exquisitely designed rubber-fiber bellows. The airspring itself does not provide force or support load, but instead, completes the force transfer and elastic behavior through compressed air that is inflated by air compressor. According to the requirements for stroke, an airspring is generally designed with 1-3 convolutions.

With nonlinear characteristics, the rigidity of an airspring changes along with the load, thus, under any load, its natural frequency almost remains unchanged. Therefore, allowing the airspring device to have near constant properties. Its performance is superb at absorbing high frequency vibrations and to deaden noise.

Air springs are widely used in trains, automobiles, paper-making machines, lifting platforms, mechanical presses, vibrating conveyors, vibrating screens, pneumatic hammers, vibration test-beds, foundry machinery and other equipments or instruments which need to control stroke or absorb shock and isolate vibration.

***Kindly enquire with us if you have requirements.***
